T = 4
T = 6
T = 8
T = 10
Occasions T (blocks); within each block the number of clusters N rises from 10 to 145 (16 values)
GEE AR(1), Fay-Graubard, t
Marginalized model with check, t
GEE exchangeable, Fay-Graubard, t
GEE exchangeable, Mancl-DeRouen, t
GLMM, likelihood ratio
clearly above 7.5% (exact 95% interval)
